(54) Puncture resistant electrostatic chuck

(57) A puncture resistant electrostatic chuck (20) is described. The chuck (20) comprises at least one electrode (25); and a composite insulator (30) covering the electrode. The composite insulator comprises a matrix material having a conformal holding surface (50) capable of conforming to the substrate (35) under application

of an electrostatic force generated by the electrode to reduce leakage of heat transfer fluid held between the substrate and the holding surface. A hard puncture resistant layer, such a layer of fibers or an aromatic polyamide layer, is positioned below the holding surface (50) and is sufficiently hard to increase the puncture resistance of the composite insulator.

**ANNEX TO THE EUROPEAN SEARCH REPORT
ON EUROPEAN PATENT APPLICATION NO.**

EP 97 30 9498

This annex lists the patent family members relating to the patent documents cited in the above-mentioned European search report. The members are as contained in the European Patent Office EDP file on
The European Patent Office is in no way liable for these particulars which are merely given for the purpose of information.
